ARE DEATHS AND ADVERSE HEALTH EFFECTS FOLLOWING VACCINATION AGAINST COVID-19 PATHOLOGICALLY RELATED?

Dear ladies and gentlemen, dear representatives of the press,
we hereby invite you to our press conference on the occasion of current events:

Reports about serious health damages even deaths in close temporal connection
with the current vaccinations against Covid-19 do not tear off.

Is there a causal connection between severe health damages and deaths with the
previously administered vaccination against Covid-19, which can be proven
pathologically?

1. What do we currently know from pathological examinations of 19 persons who died
in temporal conjunction with the vaccination?
2. What results were obtained from the analyses of the tissue samples?
3. What other relevant observations have been made about tumors and their growth
patterns?
4. Is there evidence from general death data of excess mortality caused by
vaccination?
5. What are other urgent survey and research demands?

Analysis of tissue samples from deceased persons

Pathologists Professor Dr. Burkhardt and Professor Dr. Lang have examined tissue
samples obtained from 19 autopsies of deceased persons whose deaths occurred in
a temporal association with vaccinations against Covid-19. The results of these
investigations will be presented and discussed at the International Pathology
Conference.

Tumor growth enhanced by Corona vaccines?

Dr. Krüger, a Swedish pathologist, will report on her observations that since this year,
malignant tumors in the breast are often larger and more aggressive than usual at
diagnosis, and patients are younger than the long-term average. Also, many
histopathologic findings of tumor tissue since the start of Covid-19 vaccination have
differed markedly from those Dr. Krüger has seen in her long professional career.
The report is supplemented by the reports of "turbo cancer" that have accumulated in
oncology practice.

Methodical detection of spike proteins by mass spectrometry

Pathologist Prof. Dr. Lang will report on a new scientific method for reliable detection of minute quantities of spike proteins in tissue. Detection would provide evidence that the tissue lesions observed microscopically are indeed caused by the spike proteins, as typically found in scientific research on Covid.

Current status of fatality investigation procedures

Finally, the current status of fatality investigations is reported. These include the case of a middle-aged man who died in a causal relationship with vaccination as established by forensic medicine, as well as the status of the investigation into the case of the 15-year-old girl who died after vaccination in mid-November 2021.

Insights obtained from statistical analyses of mortality data

Prof. Dr. Werner Bergholz will present his analyses of mortality data provided by government agencies. He will present evidence of higher mortality of vaccinated compared to unvaccinated persons, especially in the age group 10 - 59 years, and discuss resulting conclusions.

We look forward to welcoming you and are available to answer your questions and, if necessary, arrange interviews with our experts.

Inquiries: Elmar Becker, Attorney at Law wsu.becker@posteo.de

The speakers:

Prof. Dr. Arne Burkhardt has a long history of teaching at the Universities of Hamburg, Bern and Tübingen as well as visiting professorships/study visits in Japan (Nihon University), USA (Brookhaven National Institute), Korea, Sweden, Malaysia and Turkey. He headed the Institute of Pathology in Reutlingen for 18 years, after which he worked as a practicing pathologist. Prof. Burkhardt has published over 150 articles in journals and numerous contributions to handbooks. He has also certified pathological institutes

Prof. Dr. Walter Lang has spent 27 years running a private institute he founded for pathology with a focus on transplantation pathology, extragynecological cytology, thyroid tumors, lung/pleural pathology. He performed Consultation diagnostics for 12 major pulmonary clinics and provided Liver Pathology services for numerous clinics. During the period 2010-2020, he supervised he supervised the pathology of the lung clinic in Herner.

Ute Krüger, MD, is a specialist in pathology and senior physician at a Municipal Hospital in southern Sweden. For the past 18 years, she has been primarily with the diagnosis of breast cancer.

Prof. Dr. Werner Bergholz is a former professor of electrical engineering with a with a focus on quality and risk management at the Jakobs University in Bremen. Prior to his appointment, Prof. Bergholz worked for 17 years in the management of chip production at Siemens.

Current evidence from the scientific literature on other Vaccine adverse events:

Increased cases of herpes zoster: (<https://www.cureus.com/articles/74357-oral-herpes-zoster-infection-following-covid-19-vaccination-a-report-of-five-cases>)

Significantly increased cases of myocarditis:
